

A large industrial refinery complex is shown against a clear blue sky. The foreground features several tall, cylindrical storage tanks and complex piping systems. In the background, more refinery structures and a construction crane are visible. A white banner with text is overlaid on the bottom left.

Ditch the barcode.

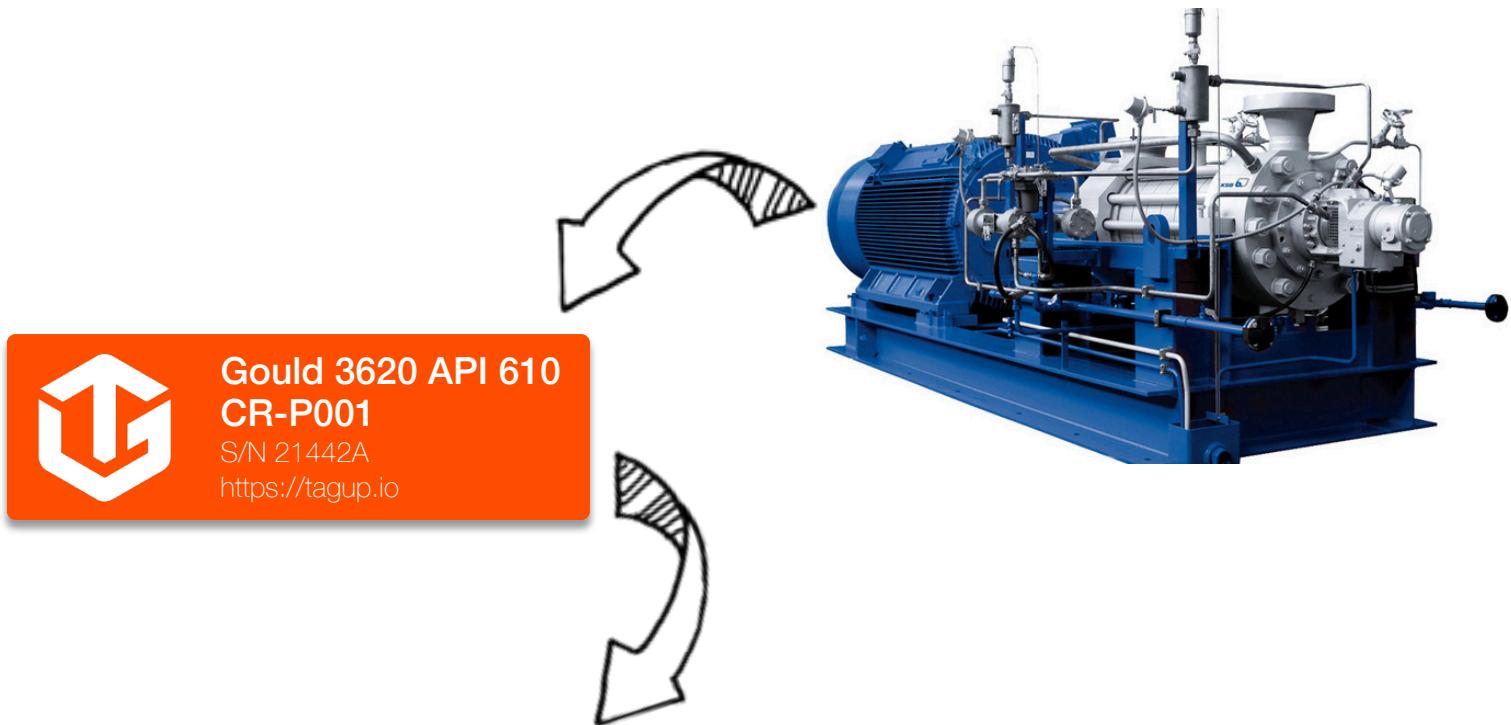

## WELCOME TO TAGUP

Tagup is **reinventing the way businesses share asset data**. We provide a web interface between manufacturers, value-added resellers, and their customers.

Tagup uses ubiquitous hardware to **connect your physical assets to the internet**. We provide you a simple and powerful way to track, maintain, and share unit information.

Gould 3620 API 610

<https://tagup.io>

The screenshot shows the Tagup mobile application interface. At the top, there's a navigation bar with icons for search, dashboard, and support. Below that is a user profile section for "Jon Garrity". The main content area displays a product card for a "Goulds 3620 API 610 S/N CR-P001". The card includes sections for "Product Images" (showing a blue pump), "Recent Product Log Activity" (listing a routine maintenance entry from November 12th), "Product Line Data" (describing the pump's features like radial split double suction), and "Features" (mentioning centerline mounted design). At the bottom of the card is a "Complete Prod" button. The overall interface is clean and modern, designed for easy access to asset information on the go.

Tagup is a web application that enables you to tag, track, and monitor your industrial assets, parts, and products. You attach a tag we supply to whatever you want to track, scan the tag with your smartphone or tablet, and you're off and running. With a simple tap or scan of your mobile device, you can add a maintenance record, request product support, capture the item's location, or share its operational status with your team.

Founded in 2014 at MIT, our goal is to change the way people interface with the material assets they work with day-to-day. We've worked night and day over the past year to build a solution transforming the way asset data is tracked and shared. Using cutting-edge web technologies and modern development methods, we have built a secure, scalable, and reliable platform for data exchange. Our patent pending solution keeps your data secure, allows you to seamlessly exchange information with your partners, and gives you end-to-end visibility across the assets and products you manage. Visit our website to request a demo. We think it'll knock your socks off.
